

Your Vision. Our Tools.

See Where You've Been & Where You're Going!

HOLEY GALAHAD® opens a window to your work. Once you experience this unique new "see-through" technology, you will "see the light."

These patent pending discs provide a unique ability to see the surface you are carving as you work.

This feature dramatically improves production by up to 15% and saves using literally hundreds of flap disc sanders. **You can see what you're doing and where you're going as you work as opposed to the standard procedure of carve, lift, check and repeat!**

Shape peaks and valleys into smooth surfaces as you see them without having to stop or blindly feel your way. Discs are 4" (100mm) in diameter and feature patented structured tungsten carbide teeth bonded to steel discs over the total cutting surface. Varying grits are manufactured in a 5-stage patented process.

Holey Galahad® discs are also quite effective on fiberglass, plastic, solid rubber, foam core, polyurethane, silicone, soapstone and composite materials.

Fits most 4-1/2" (115mm) and European 125mm angle grinders.

HOLEY GALAHAD® discs let you focus on the work at hand, while making the process literally transparent!

- Made of durable Tungsten Carbide - no heat build up.
- Available in Coarse, Medium and Fine Grits.
- Choose Round or Flat profiles to suit contoured, concave and flat surfaces.
- Discs can be used on both their face and edge surfaces.
- Excellent value - one disc saves \$100's in sandpaper, time, labor and effort.
- Use New Universal Nut to secure all round profile discs.

Please check with your local retailers.
