

ANGLE GRINDER DIAMETERS

We make accessories to specifically suit standard 4-1/2" and metric 115mm to 125mm angle grinders worldwide. Though there are differences, (voltage, rpm speed, paddle or thumb switch, battery or electric, fixed or variable speed) the one big difference between them is the thread size on the center shaft. It is either 5/8" on standard 4-1/2" grinders or 14mm on metric grinders. We have specified these dimensions for each product and for this reason have produced the chart below to help you identify and select that the angle grinder and King Arthur's Tools accessories match for your country of use.

ANGLE GRINDERS IN:	CENTER SHAFT DIAMETERS:	BOTTOM FLANGE DIAMETER:
North America	5/8" (16mm)	7/8" (22mm)
South America	5/8" (16mm)	7/8" (22mm)
Europe	14mm	22mm
United Kingdom	14mm & 5/8" (16mm)	7/8" (22mm)
Australia & New Zealand	14mm & 16mm	22mm
Japan*	14mm, 15mm & 16mm	22mm

**A 16mm center hole can be used with a bushing to step up from 15mm available from one of our Japanese distributors.*
